

# Hydration Station Hire

**Hydration Stations are the low cost, user friendly, ecological answer to the overuse of plastic water bottles at festivals and other outdoor events.**

The Drinking Water Club Hydration Stations are the low cost, user friendly, ecological answer to the overuse of plastic water bottles at festivals and other outdoor events.

Our fresh water Hydration Stations are available to hire for just about any kind of event, and can really help reduce the waste from single use plastic bottles, allowing organisers to offer free, fresh drinking water to anyone with a multi-use sports/ refillable bottle.

The Drinking Water Club Hydration Stations measure 240cm x 50cm x 120cm (WxDxH) and have four taps. With a normal domestic water pressure, these will fill 4 x 500ml water bottles in less than 20 seconds, 12 x 500ml in one minute and 720 x 500ml water bottles per hour, allowing time to actually remove the water bottle and put the next bottle under the tap.

The hydration stations can be linked together back to back and with the same water pressure, can fill 1440 bottles per hour.
